

Batten Doors

Kafe House

OVERVIEW

Batten garage doors blend modern style with durability in timber, aluminium, or wood-look finishes. Open or backed panels allow ventilation or full enclosure, while a matching head panel adds a seamless touch. Low-maintenance and customisable, they suit both residential and commercial spaces.

While we customise doors to meet any specification, our standard batten size and gap size is:

- Batten size: 38mm x 16mm
- Gap width: Approximately 20mm (adjusted so each door starts and ends with a full batten)

Standard Features

- **Custom Aluminium Frames:** Our PGDM aluminium frames and extrusions provide superior strength and a refined finish.
- **Panel Bracing:** Additional bracing in the bottom panel for doors over 5000mm prevents sagging or “smiling.”
- **High-Quality Hardware:** We use premium hinges and hardware for durability and longevity.
- **Proudly Australian Made:** Designed and manufactured locally for unmatched quality and reliability.

Customisable Style Options

Tailor your batten door with a range of finishes and materials:

- **Open Batten Design (No Backing):** Battens mounted directly onto the frame allow airflow, ideal for areas where council regulations prohibit sealed doors.
- **ACP Backing (Black or White) with Western Red Cedar Battens:** A stunning natural timber option.
- **ACP Backing (Black or White) with Wood-Look Aluminium Battens:** Choose from Knotwood or Decowood for a realistic timber appearance.
- **2mm Aluminium Backing with Powder-Coated Aluminium Battens:** Select from a range of colours to match your project.
- **Flush Mounting with Matching Head Panels:** Achieve a clean, seamless look.
